

## **RINGCUBE OPTIMIZES MOJOPAC DESKTOP VIRTUALIZATION SOFTWARE FOR USB FLASH DRIVES – IN TIME FOR HOLIDAYS**

### **New MojoPac Delivers Triple the Performance of Previous Versions on USB Flash Drives**

**Santa Clara, Calif., December 12, 2007** – RingCube Technologies Inc., the company that revolutionized personal computing with its award-winning MojoPac virtual desktop technologies, today announced its latest version of software optimized for USB Flash Drives.

Available just in time for the holidays, the latest MojoPac allows users to carry everything that is personal from their PC – software, games, preferences, photos, etc. – on a durable flash drive while experiencing the faster speed and experience previously limited to USB hard drives. MojoPac optimized for flash drives works three times faster than previous versions, allowing users to transform any PC into their personalized desktop simply by plugging in their MojoPac-powered USB memory stick.

“As families reunite around the holidays, MojoPac provides a unique way for parents to allow their children and houseguests to use the family PC,” said Pete Foley, CEO of RingCube Technologies. “Parents can give their children their own personal MojoPac on a stick, and relax, knowing that anything the kids do on MojoPac will stay on the MojoPac, leaving the family PC clean and pristine.”

The updated MojoPac includes an automated, built-in utility to test the performance of USB flash drives before installing MojoPac. The easy-to-read performance meter provides a green/yellow/red color-coded output, indicating whether the drive will deliver the necessary performance to ensure a quality user experience when running desktop applications. Since most flash drives are designed for the copy and storage of data rather than the more demanding task of running applications, this release of MojoPac helps customers experience enhanced application performance comparable to launching an application on your host device.

With hundreds of thousands of downloads of its free MojoPac Freedom software, RingCube is changing the PC experience for consumers worldwide. Because everything the MojoPac user does stays within MojoPac, the virtualization software also ensures the host PC is not affected by

anything the user does. Once the USB drive with MojoPac is turned off and unplugged, all traces from that user's experience are removed with the device.

To download the new version of MojoPac, or for more information about the full MojoPac product line including MojoPac Freedom, go to [www.mojopac.com](http://www.mojopac.com).

**About RingCube Technologies, Inc.**

Founded in 2004, RingCube is the leading provider of the secure, managed digital workspace. The company's award-winning software platform, MojoPac, enables consumers and enterprise users to securely access their complete personal computing experience from any Windows PC around the world. The company is venture-backed by New Enterprise Associates (NEA) and Mohr Davidow Ventures (MDV) and is based in Santa Clara, California.
